

# Company Energy

## Global Thermostat

April 27<sup>th</sup> 2016

Global Thermostat  
named “One of The 50  
Most Innovative New  
Renewable Energy  
Companies”

To make our list, your company had to be, first and foremost, innovative. Your company needed an innovative product, technology, or process to even have been considered for our rundown. That’s because innovation is what will eventually rid us of our dependence on fossil fuels. And innovation will help more people get affordable energy on this planet.

### **Global Thermostat NYC, NY and Princeton, NJ**

The Industrial Revolution has been a lot of fun but it has pumped a bit too much carbon dioxide into the atmosphere. As we all know, CO<sub>2</sub> is not good for our environment. Global Thermostat wants to help our environment with their CO<sub>2</sub> capture and use technology. Their device draws CO<sub>2</sub> directly from the air—it’s like a scrubber on steroids. It’s cheap, easy to use, a breeze to integrate, and can be placed just about anywhere.
